DETAILED ACTION

- 1. Claims 1-8 are presented for examination.
- 2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-8 are rejected under 35 U.S.C. 103(a) in view of Hoffberg et al. (hereinafter Hoffberg) US-6400996 over Gram, US-5,760,768.
- 5. As per claim 1, Hoffberg teaches a method of customizing a graphical user interface (adaptive interface) for a computer controlled system having at least one selectable parameter, comprising the steps of: monitoring the selection of the selectable parameter by a user (past history); determining any pattern of selection (use pattern); devising an optimized arrangement of the parameter selection which matches the pattern of selection; and displaying the optimized arrangement (Abstract, lines 1-21; col. 50, line 53-col. 51, line 14; col. 116, lines 50-64).

Hoffberg does not explicitly teach the providing of actuatable means arranged so that a user can access the actuation to provide input to the display arrangements. However, Gram

Application/Control Number: 09/954,648

Art Unit: 2174

teaches a means that allows a user to accept or change a displayed arrangement (col. 2, line 65-col. 3, line 9). It would have obvious to one ordinary skill in the art at the time of the invention to combine the teachings of Hoffberg with Gram's step of incorporating user input in order to insure that there is user confirmation and approval of the modified display arrangement.

- 6. As per claim 2, Hoffberg teaches the method in which the parameters are displayed as a menu and the order of the parameters in the menu is varied (*multiple choices displayed on interface with varying probability, based on user history*) (col. 116, lines 37-49, col. 50, lines 53-62).
- 7. As per claim 3, Hoffberg teaches the method in which the selectable parameters are channels of a multi-channel television system (*various programs/channels are presented as selectable parameters*) (col. 116, lines 33-49).
- 8. As per claims 4, 5 and 6 Hoffberg teaches the method in which the selectable parameters are processing parameters of an optical processing system that is an x-ray image processing or recording system (*medical device interfaces*) (col. 131, line 49-col. 132, line 17).
- 9. As per claim 7, Hoffberg teaches the computer controlled system having a customizable graphical user interface by which a plurality of parameters can be selected comprising: display means to display the parameters; selection means to select the parameters; monitoring means to

Art Unit: 2174

monitor the selection of parameters and to devise an optimized arrangement of the parameter selection (Abstract, lines 1-21; col. 50, line 53-col. 51, line 14; col. 116, lines 50-64).y7

Hoffberg does not explicitly teach the providing of actuatable means arranged so that a user can access the actuation to provide input to the display arrangements. However, Gram teaches a means that allows a user to accept or change a displayed arrangement (col. 2, line 65-col. 3, line 9). It would have obvious to one ordinary skill in the art at the time of the invention to combine the teachings of Hoffberg with Gram's step of incorporating user input in order to insure that there is user confirmation and approval of the modified display arrangement.

10. As per claim 8, Hoffberg teaches the system in which the actuable means is a manual control (user is presented with choices) (col. 116, lines 50-67).

Conclusion

- 11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:
 - a. US-5977964- configurations based on user preferences
- 12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sindya Narayanaswamy whose telephone number is (703) 305-8473. The examiner can normally be reached on 8 am to 5 pm, first Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kristine Kincaid can be reached on (703) 308-0640. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
